

BidForge Agent

Agentic bid response command center for enterprise RFPs

React

TypeScript

Python API

RBAC

Automation

ROI

Pitch: BidForge converts an RFP into a governed, evidence-backed bid package in minutes while humans control approvals.

Winning Signal	What Judges See
Business value	Hours saved, ROI simulator, benchmark evidence
Agentic workflow	7 agents plus automation and judge verification
Enterprise trust	RBAC, audit trail, guardrails, approval gates
Real app feel	Role-based end-to-end flow with Admin tracker

Problem

Enterprise RFP response is high-value work trapped in slow manual coordination.

Current pain

- Manual requirement extraction from long RFPs
- Scattered proposal content and weak evidence reuse
- Late legal, finance, delivery, and security review
- Missed clauses create compliance and commercial risk
- Leadership lacks real-time readiness and ROI visibility

Target users

Role	Need
Bid Manager	Coordinate bid readiness
Legal	Approve risky clauses
Finance	Validate pricing/SLA assumptions
Delivery	Confirm feasibility
Admin	Track gates and audit

Solution

A governed bid operating system, not just a chatbot.

Capability	Implemented Demo
RFP intake	Upload/paste RFP, parse buyer/project/requirements
Compliance matrix	Requirement table with category, owner, evidence, confidence
Proposal draft	Generated sections with unsupported claims marked
Risk register	Legal, finance, security, delivery risks routed early
SME task board	Kanban by owner and status
Judge report	Coverage, citations, hallucination control, readiness
Governance	RBAC, approval gates, audit trail, final export block

Agentic Workflow

Specialized agents create artifacts, then governance and automation keep them controlled.

Agent	Output
Intake Agent	Normalized RFP, metadata, prompt-injection warning
Requirement Agent	Requirement IDs, priority, owner, evidence
Capability Agent	Knowledge snippets and reusable content
Proposal Writer	Draft sections and assumptions
Risk Agent	Risk register with severity and mitigation
SME Router	Role-specific task board
Judge Agent	Quality report and readiness score

Architecture

Lightweight hackathon runtime with production-ready boundaries.

Runtime

- React/Vite command center
- Python stdlib API
- BidForge orchestrator
- Automation scheduler
- Local JSON audit and automation state
- Deterministic derivation for repeatable demo

Production upgrade path

- FastAPI/API gateway
- Postgres and object storage
- RAG over SharePoint and proposal bank
- SSO and Azure AD role mapping
- Workflow tool integration
- Immutable audit and SIEM export

DEMO SCORECARD

Manual baseline vs BidForge Agent

Small controlled benchmark set for judge demos. Scores are deterministic sample assumptions, not enterprise production claims.

+26% average coverage lift

Manual baseline 65%

Average requirement coverage

Agent coverage 91%

Matrix coverage with citations

Risk lift +32%

Average detection improvement

Current run 92%

84 requirements analyzed

Banking migration RFP 84 requirements

Requirement coverage 62% baseline 92% agent

Risk detection 54% baseline 88% agent

Retail DevSecOps RFP 47 requirements

Requirement coverage 68% baseline 91% agent

Risk detection 49% baseline 83% agent

Insurance data platform RFP 63 requirements

Requirement coverage 65% baseline 89% agent

Risk detection 57% baseline

End-to-End Role Flow

Judges can switch roles and see the Admin tracker update live.

Step	Owner	Gate
Upload and configure RFP	Bid Manager	Intake complete
Legal compliance review	Legal	Legal approval
Commercial review	Finance	Pricing approval
Security evidence review	Security	Security approval
Delivery feasibility	Delivery	Delivery approval
Final export	Bid Manager	Final export

Admin sees approved, waiting, blocked counts plus current owner and event log.

Governance And Trust

Human approval and audit controls are built into the demo path.

Controls

- RBAC for automation operations
- Prompt-injection quarantine
- Audit trail for run and automation actions
- Approval gates by Legal, Finance, Security, Delivery
- Final export blocked until gates clear

Judge verification

- Requirement coverage
- Citation support
- Hallucination control
- Risk detection
- Proposal usefulness
- Human-review readiness

ROI And Savings

BidForge makes the value story measurable during the demo.

Metric	Default Demo Value
RFP size	118 pages
Reviewers	6
Baseline effort	197 hours
Assisted effort	63 hours
Hours saved	134 hours
First-draft reduction	68%
Estimated value	USD 12,730

All assumptions are editable in the ROI Simulator and exportable as JSON evidence.

Benchmark Mode

A controlled scorecard compares manual baseline vs BidForge Agent.

Case	Manual Coverage	Agent Coverage	Risk Lift
Banking migration RFP	62%	92%	+34%
Retail DevSecOps RFP	68%	91%	+34%
Insurance data platform RFP	65%	89%	+29%

Benchmark values are deterministic demo assumptions, designed for transparent judge review.

Live Demo Plan

A concise path that proves business value, agentic depth, and governance.

Minute	Action
0-1	Dashboard and upload RFP
1-2	Compliance matrix, risk register, proposal evidence
2-3	Judge report and executive win brief
3-4	Legal approval in Role Flow, Admin tracker update
4-5	Governance, audit, automation
5-6	ROI simulator and Benchmark Mode exports

Why BidForge Wins

It combines enterprise impact, working software, governance, and measurable outcomes.

Differentiators

- End-to-end bid lifecycle, not a single prompt
- Role-based flow and Admin tracker
- Evidence-aware proposal drafting
- Human-in-the-loop governance
- ROI and benchmark proof
- Automation with audit history

Ask

- Pilot with sample RFPs and anonymized proposal bank
- Connect SharePoint/Teams and legal clause library
- Measure cycle-time reduction and reviewer effort
- Scale into reusable enterprise bid platform

Closing: BidForge is the governed operating system for enterprise bid response.
