

Northwind Bank

Request for Proposal: Core Banking Cloud Migration and Managed Operations

RFP ID: NWB-CLOUD-2026-001 | Issue date: July 2026 | Response due: 14 calendar days from issue

1. Executive Summary

Northwind Bank is seeking a strategic technology partner to migrate selected core banking workloads to a governed cloud operating model. The selected vendor will provide migration planning, application modernization support, security controls, service transition, and managed operations.

This is an anonymized demo RFP created for BidForge Agent testing. It contains realistic enterprise requirements but does not represent a real procurement event.

2. Business Objectives

The bank wants to reduce infrastructure risk, improve release velocity, strengthen audit readiness, and establish resilient 24x7 operations. The proposal should explain how the vendor will govern migration waves, protect regulated data, maintain service continuity, and provide measurable delivery assurance.

3. Scope of Work

The vendor will assess the existing estate, define the migration approach, prepare a wave plan, support modernization decisions, establish cloud landing-zone controls, transition services into managed operations, and provide reporting for risk, issues, service levels, and audit evidence.

4. Mandatory and Preferred Requirements

ID	Requirement	Priority	Owner
M-001	Vendor must provide 24x7 Level 1, Level 2, and Level 3 support for core banking workloads.	Mandatory	Delivery
M-002	Supplier shall comply with EU data residency and must identify where regulated data is stored, processed, and backed up.	Mandatory	Legal
M-003	Provider must include an incident response process with escalation contacts, severity levels, and reporting timelines.	Mandatory	Security
M-004	Vendor must provide a transition plan for migration waves, dependencies, rollback, and service continuity.	Mandatory	Delivery
M-005	Proposal must include security control mapping aligned to ISO 27001 practices and audit evidence.	Mandatory	Security
P-001	Preference for a fixed-price transition model with clearly stated assumptions and exclusions.	Preferred	Finance
P-002	Preference for reusable migration accelerators, automated compliance checks, and release telemetry.	Preferred	Solution Architect

5. Security, Legal, and Compliance Expectations

The supplier must identify any data residency assumptions and must not claim compliance without evidence. The proposal should include security control mapping, incident response ownership, audit support, and a description of how

regulated banking data will be protected during migration and operations.

Any subcontractor or offshore support model must be clearly described. If data or access may leave the European Union, the vendor must identify the legal basis, control process, approval requirement, and risk mitigation approach.

6. Commercial and SLA Expectations

Northwind Bank prefers a fixed-price transition model, but all assumptions, exclusions, and dependencies must be explicit. Vendors must confirm whether 24x7 support is included in base pricing and describe any SLA penalty exposure, service credits, or commercial exceptions.

7. Response Format

The response must include an executive summary, compliance matrix, solution approach, transition plan, security and compliance section, commercial response, risk register, assumptions, and evidence appendix. Each mandatory requirement must be mapped to the proposal section where it is addressed.

8. Evaluation Criteria

Evaluation Area	Weight	Notes
Requirement coverage	30%	Mandatory requirements must be explicitly mapped and cited.
Solution approach	20%	Cloud migration wave plan, governance, and operational readiness.
Security and compliance	20%	Data residency, incident response, ISO-aligned controls, audit evidence.
Commercial model	15%	Fixed-price assumptions, exclusions, SLA penalties, and transition cost clarity.
Delivery confidence	15%	24x7 support, staffing, escalation, service continuity, and risk management.

9. Questions for Vendors

Vendors should answer the following questions in the proposal:

1. How will you maintain service continuity during migration waves?
2. What controls prove EU data residency and audit readiness?
3. How will incidents be escalated, reported, and remediated?
4. What assumptions are required for fixed-price transition pricing?
5. Which reusable accelerators or automation assets will reduce delivery risk?

10. Submission Instructions

Responses must be submitted as a single PDF package with appendices. The bank reserves the right to request clarifications from legal, finance, security, and delivery representatives before final evaluation.
